DETAILED ACTION

This Examiner Amendment and Reasons for Allowance action is in response to the filing of 01/20/2010.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ronni Jillions on 03/11/2010.

The application has been amended as follows:

- **Amendments to Specification:**

- On page 1, line 4, before first paragraph, the section heading "SUMMARY" has been replaced with --BACKGROUND OF THE INVENTION--
- On page 1, line 24, before the paragraph starting with "it is the objection of the invention to provide method and system for transparent access authentication..." the section heading --BRIEF SUMMARY OF THE INVENTION-- has been added.

- **Amendments to the claims:**

- Claim 9

- Line 6, “assembles data according to the method of claim 1” has been replaced with --performs the transparent access authentication according to the method of claim 1--
- Claim 10
 - Line 2, “the first unit” has been replaced with --said at least first authentication unit--

Allowance

2. Claims 8, 11, and 18 have been cancelled.
3. Claims 1-7, 9-10, 12-17 are allowed.

Allowable Subject Matter

4. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a method for transparent access authentication of subscribers connected to an authenticating network domain by General Packet Radio Service GPRS core network or an Universal Mobile Telecommunication System UMTS.

Independent claim 1 recites the uniquely distinct features of “assigning an IP address to the context creation request; receiving a check-in ID from the subscriber; receiving a private identification PrivID from the subscriber, the PrivID being correlated with a pre-recorded ID of the subscriber and stored together in a subscriber database; providing a routing module (7) as a standard entry point for all messages and deciding,

Art Unit: 2437

in the routing module (7), by evaluation of the PrivID, which network node will handle the message, wherein when a protocol other than Session Initiated Protocol SIP is found, the message is routed to a proxy server". The closest prior arts, Skog et al (US Patent no.: 6,977,917) and Enzmann et al (US Patent Application Pub. no.: 2004/0136398) disclose associating a mobile terminal's temporarily assigned IP address with a MSISDN number for use with authentication and interpreting by a smart router the type of data incoming to determine what item in a home network conversion interface the data should be set that fails to anticipate or render the above underlined limitations obvious.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
